Department of Experimental and Clinical Biomedical Sciences "Mario Serio" Course coordinators Cosimo Nardi Executive Committee Contact person for information regarding teaching organization, class schedule, course content Practical-professional profile of the course and industry sector of reference This Master Course grew out of a desire to provide in-depth knowledge in magnetic resonance imaging at a high level and from the initial experiences of an advanced training course taught in a hospital setting. Nowadays, the Master Course offers highly specialized postgraduate training in Magnetic Resonance Imaging in the technical field thanks to a pathway that, starting from the physical basics, leads to the systematic study of the sequences and the associated parameters. Constant attention is paid to technological evolutions. Lectures, grouped by modules, are given by radiology ethenician faculty for a description of sequences and in-depth study techniques by district, by medical physicists for physical principles of MRI imaging, and by radiology physicisns for discussion of the technical conduct of an examination and by engineers for some technical lectures. A part of the internship is also planned at the facility hosting the Master (Careggi University Hospital), a hospital where third-level diagnostic examinations are performed, thus allowing students to benefit from the opportunity to attend highly specialized 2nd and 3rd level examinations. The course content also includes cooperation with leading MRI equipment manufacturers to explain the most important technological innovations introduced to the market. The title of "Magnetic Resonance Imaging Specialist," which is also included in the new labor contract as part of the sector of new positions linked to the acquisition of professional master qualifications, can be leveraged in various work contexts, mainly in hospitals (both public and private) but also as an application specialist at most major MRI equipment manufacturers both in Italy and abroad. To	19. SPECIALIST IN OPTIMIZATION AND DEVELOPMENT OF MRI EQUIPMENT, SEQUENCES AND STUDY TECHNIQUES ⁱ

The title of "Magnetic Resonance Imaging Specialist," which is also included in the new labor contract as part of the sector of new positions linked to the acquisition of professional master qualifications, can be leveraged in various work contexts, mainly in hospitals (both public and private) but also as an application specialist at most major MRI equipment manufacturers both in Italy and abroad. To this end, training will be structured as follows: Module 1. Introductory elements of mathematics, statistics, physics, and computer science - Basic mathematics - Statistics - Elements of computer science in medical imaging - Elements of MRI physics - Signal theory Module 2. Physics, instrumentation/technology and safety in magnetic resonance imaging - Physics of MR imaging - Safety in MRI Module 3. Techniques and technologies of applied MRI		·

	of Educators in Imaging and Radiologic Sciences, and the Section for Magnetic
	Resonance Technologists of the International Society for Magnetic Resonance in
	Medicine. All rights reserved.
	At the end of the course, learners will have acquired the following knowledge
	and skills:
	Perform their activities independently, on the clinical indications of the
	Radiology Physician; evaluate and optimize protocols for performing
	examinations on specific MRI equipment and performing post-processing
	procedures agreed upon with the Radiology Physician and the Health
	Physicist;
	Manage the technical aspects and takeover of the MRI site in the specialized
	area in question; be the contact person for equipment maintenance
	technicians. Collaborate with the Health Physics Unit for quality controls of
	equipment and new technologies implemented currently and in the future.
	Take charge of training and disseminate their acquired knowledge among
	colleagues. Provide training and shadowing on the MRI equipment to other
	colleagues so that they are trained in the acquisition, execution, and post-
	processing of the required procedures; to be a point of reference for new
	hires and undergraduate learners approaching the method.
	Actively participate in training and research projects in collaboration with
	colleagues, external agencies, and professionals, particularly University
	institutions.
	To develop and expand the knowledge acquired during the Master Course with the latest applications (software, tashniques) considering the
	with the latest applications (software - techniques) considering the
Acces musica mustativa	continuous technological evolution, to update one's and the team's skills.
Access prerequisites	Bachelor's degree obtained in accordance with ex-Ministerial Decree No.
	270/2004 (or ex-Ministerial Decree
	No. 509/1999 equated pursuant to I.D. July 9, 2009) in Medical Radiology
	Imaging and Radiotherapy Techniques in the L/SNT3 Class of degrees in
	technical health professions or equivalent degree pursuant to Law No. 1/2002,
Househo advelacia:	provided it is combined with a high school diploma
How the admission	Selection by qualifications combined with test, aimed at verifying knowledge on
procedure takes place	the MRI. The test will consist of a multiple choice test (only on MR)
Domatica	The test will consist of a multiple-choice test (only on MR).
Duration	10 months

Teaching methods	Blended mode (the platforms for the distance learning part will be Cisco Webwex Meeting and Google Meet)
Language of instruction	Italian
Attendance requirements	75% of classroom lectures 75% of internship
Location of the course	CDM classrooms, NIC Careggi classrooms
Foreseen lecture schedule	Classes are held in 3-day slots (rarely 4 days in case of make-ups) on Mondays, Tuesdays, and Wednesdays, once or twice a month for a total of 12 slots
Examinations procedures and schedule	 There are 7 profit tests, 1 for modules 1 and 2, 3 for module 3, and 2 for module 4 Assessment will be a test with 4 answers, only one of which is correct, except for the third assessment of module 3, which will be oral.
	- Examinations will be held in February, March, July, September, October, December and January
Final examination	The final examination consists of the presentation of a paper.

Available places and enrolment fees			
	Full-fee students		
Minimum number	20		
Maximum Number	40		
Enrolment fee	€2,500		
	Free-of-charge supernumerary places		
UNIFI employees	1		
Single Modules			
None planned			

Description of the activities and training objectives of	The internship is held at Careggi University Hospital on MRI equipment implemented with the latest technology on the market, where second and third-
the internship	level examinations are performed daily.
	It aims to see applied in working practice all the technologies, study techniques,
	technological developments, and advanced applications explained in the various
	Master's lectures by Medical Physicists for physical principles of MRI imaging,
	TSRMs for a description of sequences, and in-depth study techniques by district,
	Radiology Physicians for discussion of technical conduct of examination and
	Engineers for some specialized lectures.
	The internship takes place directly at MRI sites equipped with four 1.5T
	equipment and one 3.0T research equipment, implemented with the latest
	technology in MRI.
	The internship also includes a portion of meetings held by Specialists from the
	Industry who will demonstrate the operation of their latest equipment with the
	use of simulators. Observational activity.
